

Communications in Mathematical Analysis

<http://math-res-pub.org/cma>

Communications in Mathematical Analysis (CMA) is an international research journal of rapid dissemination, devoted to the publication of high level research articles in all areas and sub-areas of mathematical analysis and their applications. In particular, it encourages interdisciplinary papers that cut across sub-disciplines within mathematical analysis and to neighboring fields; for example by applying one area of analysis to a different one; or to a problem in related sciences; and by exploring entirely new directions of research.
